Many people take diabetes pills or tablets to help them control their diabetes. Pills for diabetes are not insulin.

Diabetes pills work in a number of ways and in different parts of the body. The drawing (picture) below shows you where and how many commonly used diabetes pills work.

**LIVER**
- **Glucophage* Actos**
  - Help to lower the amount of sugar (glucose) made by the liver.

**LIVER AND PANCREAS**
- **Januvia, Onglyza, Tradjenta, Nesina**
  - Help the pancreas produce more insulin and also help lower the amount of sugar made by the liver.

**PANCREAS**
- **Glimepiride**
- **Glyburide**
- **Glipizide**
- **Nateglinide**
- **Repaglinide**
  - Help the pancreas produce more insulin.

**MUSCLE CELLS**
- **Glucophage* Actos**
  - Help muscle cells make better use of the body’s insulin.

**KIDNEYS**
- **Farxiga Invokana Jardiance Steglatro**
  - Lower the amount of sugar the kidneys keep in the body.

**INTESTINES**
- **Precose, Glyset**
  - Slow how the body breaks down some carbohydrates (which helps slow the rise of blood sugar levels).

---

*METFORMIN is the generic name of Glucophage.
